

TEAM 47

SMART AGRICULTURE ASSISTANT

M U H A M M A D A B D U L L A H

ABOUT PROJECT

The goal is to help farmers detect crop diseases, estimate crop yield, recommend fertilizers, and monitor farm conditions from a single platform.

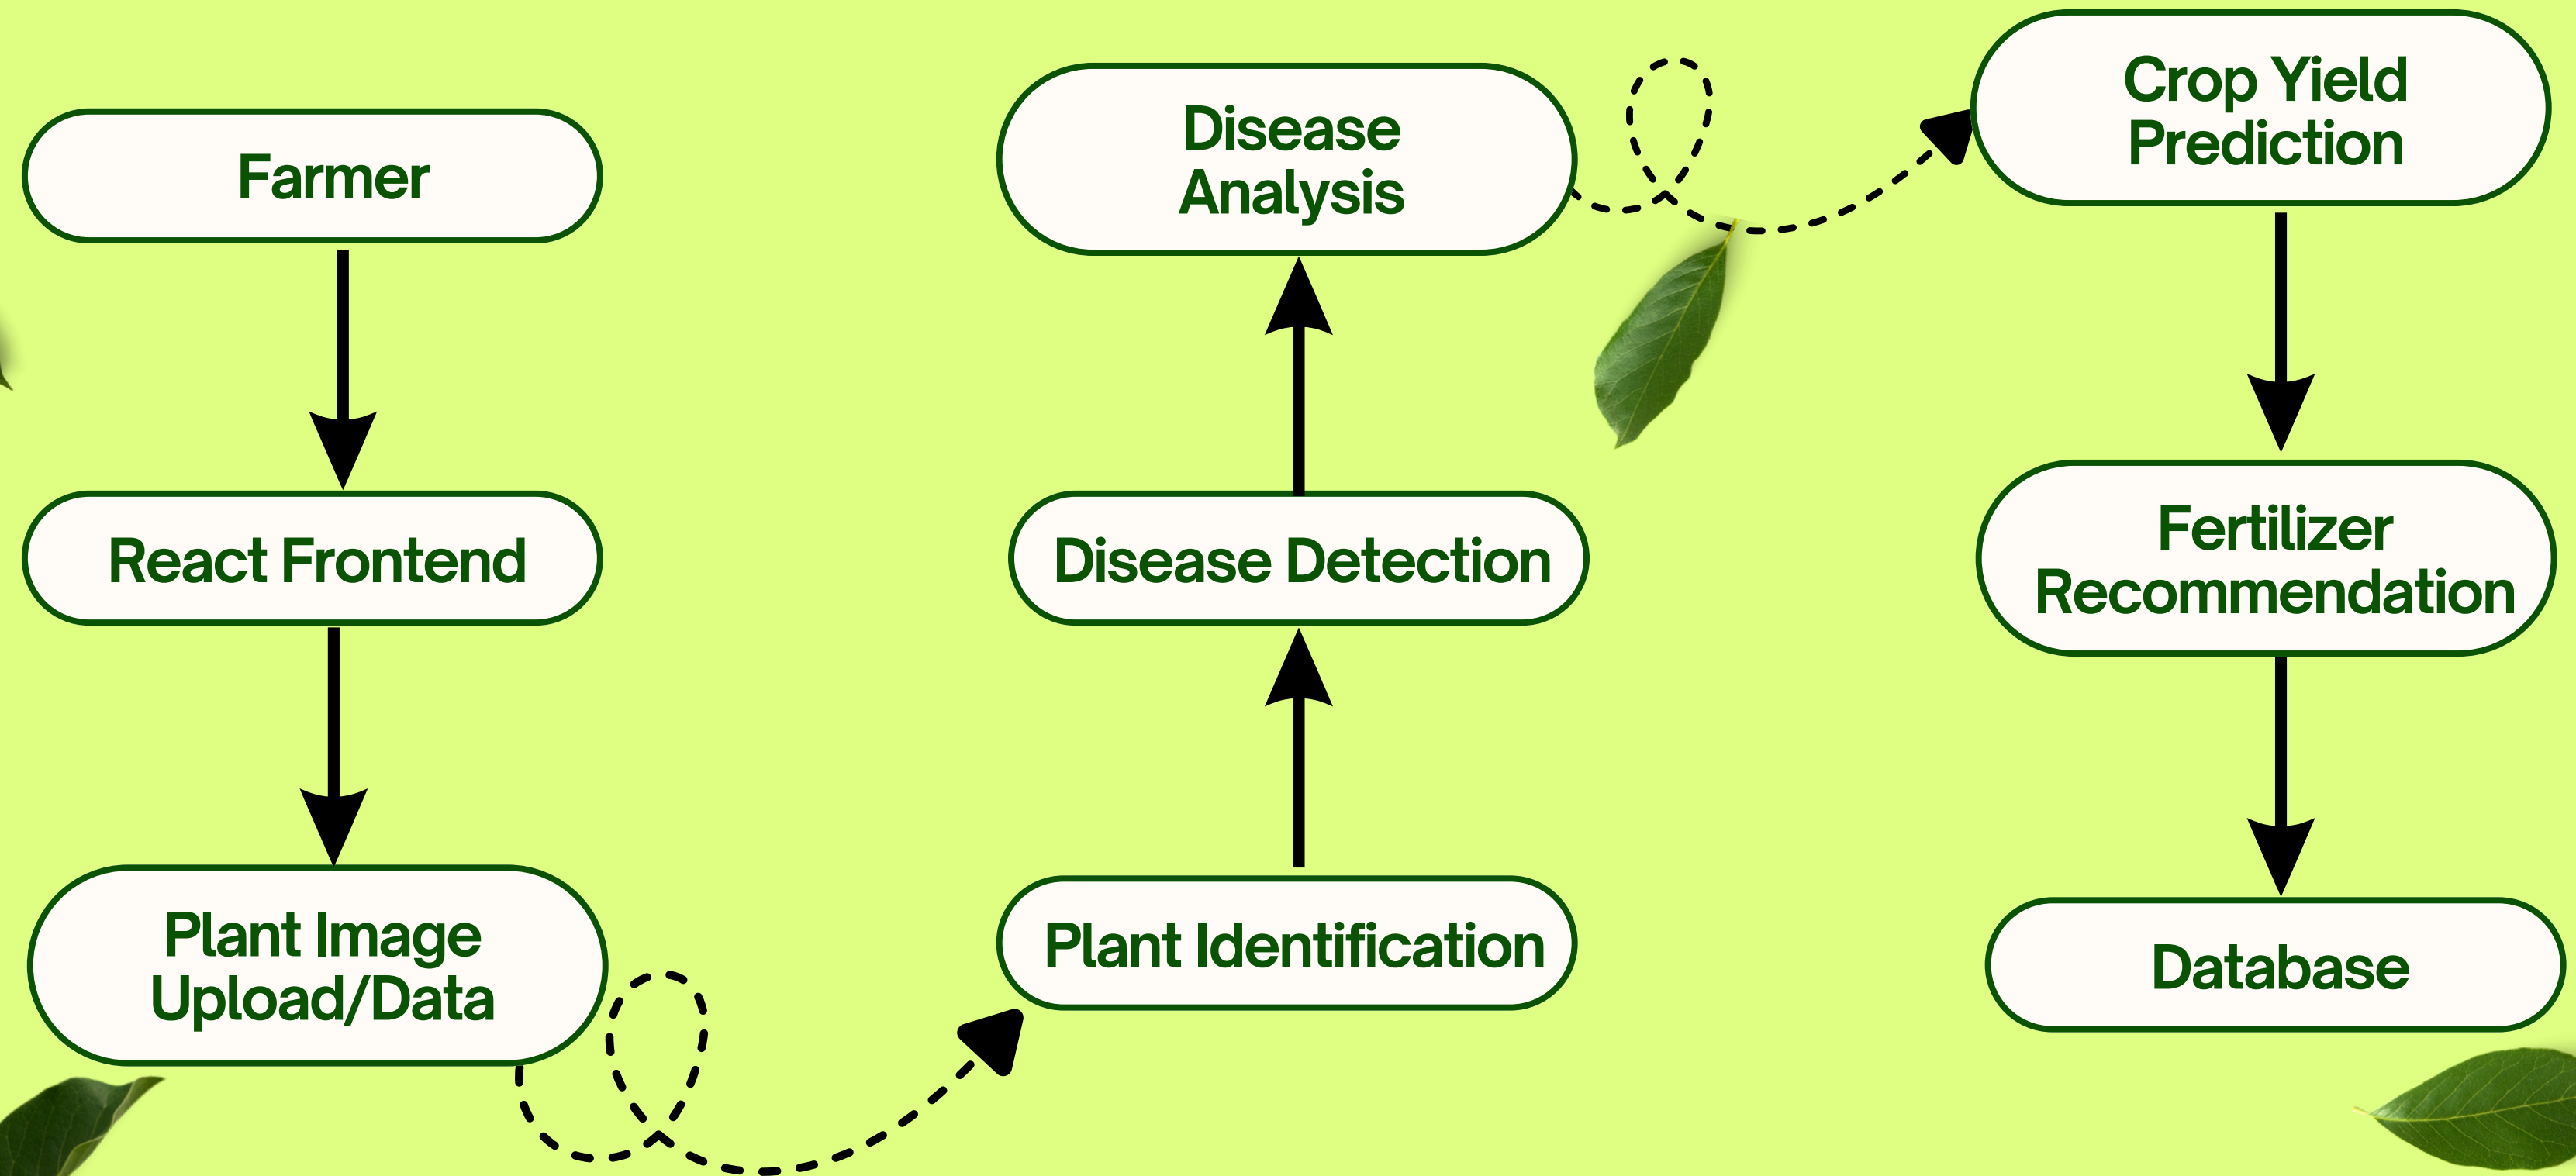

TECHNOLOGIES TO USE

This project combines Computer Vision, Machine Learning, Recommendation Systems, Backend Development, Databases, APIs, and UI Development in a single application.

ARCHITENTURE

A photograph of a hydroponic grow rack filled with lush green basil plants. The plants are arranged in rows within a white tray, and the entire setup is illuminated by several long, silver fluorescent grow lights. The background is a soft, out-of-focus green. In the foreground, there are some dark green, serrated leaves, possibly from a different plant, adding depth to the image.

THANK YOU
